

Graduate Puzzle: Readify Bank

Introduction

Your first step in the Readify Graduate recruitment process is to demonstrate your skill, knowledge and resourcefulness by developing the Readify Graduate puzzle.

The puzzle is simple, it is a C# interface for Readify Bank. You will need to implement the methods and properties contained in the interface files, which are located in the same zip file as this document.

The interface files are:

- IAccount: a bank account
- IStatementRow: a single statement row in the customer's statements and mini statements
- IReadifyBank: defines the methods to operate Readify Bank

When developing your Readify Bank, please be mindful of the following:

- Your submission should implement the IReadifyBank interface and use IAccount and IStatementRow
- Your submission must be developed using C#
- Your submission should be production ready
- Your submission should be understandable and maintainable by other developers
- Your submission should be robust and handle error situations
- Your submission should be bug free, compile and work

We are specifically looking for **elegant, maintainable and well documented code**. Inclusion of new technology features can be a bonus if it does not compromise the simplicity of the solution.

Code must be submitted in zip format. When you have completed the puzzles, submit them via the link found in your status page.

Your submission will be reviewed by our senior consulting team and once all applications are reviewed after the cut off date, we will be in contact.

Good luck! And thank you for your interest in a position with Readify!

If you have any questions or feedback please reach out to careers@readify.net.
